Brand Community Gifting Insights

Consumer Research
Channel Strategy

THE BRAND

European-origin formula, purpose-built for China

- Manufactured in the Netherlands, specially customised for Chinese infant nutritional needs
- Formula range covers newborn through to 5–6 years old
- Sales via E-commerce and offline retail / specialist baby stores

THE CHALLENGE

- Increase sales promotion by pairing formula with the right gifting ideas by channel
- Deepen understanding of segmented user purchase behaviour and gifting preference by baby age

Methodology

Participants

249

Total sample

100%

Female

22–45

Age range

- Brand community members — purchased and registered prior to survey
- Online questionnaire administered via brand community platform

- Cross-tabulation of **baby age group** against **purchase behaviour and gifting preference**
- Banners set by main purchase channel
- Significant testing applied to flag meaningful segments between segments

Social Media Sentiment Deep Dive

THE CHALLENGE

Despite growing social buzz, sales on e-commerce platform were falling: a disconnect between online engagement and actual purchase behaviour.

-16%

Sales Decline

+27%

Social Engagement

Method & Insight

01

Data Collection

Scraped all posts mentioning brand and product names from Xiaohongshu and Taobao, capturing reviews and organic social content.

02

Sentiment Scoring

Score = % positive – % negative comments.
Benchmarked against 2 direct competitors to contextualise performance.

03

Word Cloud & EDA

Ran frequency analysis on negative comment keywords and verbatim user quotes to identify the dominant pain point.

SENTIMENT SCORE — 2024 YTD

NEGATIVE TOPIC DISTRIBUTION

Key Finding

Negative social engagement was driven almost entirely the clumping issue

TOP NEGATIVE KEYWORDS

A word cloud of negative keywords. The word 'Clumping' is the largest and most central. Other words include 'Dissolving', 'Mixing', 'Temperature', 'Lumps', 'Shaking', 'Stirring', 'Preparation', 'Residue', 'Water temp', 'Texture', 'Particles', and 'Powder quality'.

USER VERBATIMS

"You have to shake it forever."

"After researching, I switched to this brand... but it still clumps. I end up using an electric mixer every time."

"No matter how much I shake it, it just won't dissolve — and it foams a lot. This isn't my first time making formula."

Strategy & Results

1 Customer Service Re-framing

"The formula keeps clumping — is this a quality issue?"

CS

Not a quality issue! Dissolve in 40–50°C water and stir gently. An electric milk frother works great too!

Template deployed across E-commerce platform

RESULTS — 2 weeks post-launch

Both strategies deployed simultaneously across CS and organic social channels

2 UGC Education Campaign

- Seeded UGC content on Rednote demonstrating warm-water dissolving technique and electric mixer pairing
- Transformed "quality complaint" narrative into a "how-to usage" conversation, shifting tone organically
- Paired product with everyday tools (electric mixer) to normalise the preparation process
